Operator's Manual Update 2011.09.27 - Towing

Thomas Built Buses recommends that when a C2, HDX, EF, or Minotour requires towing, that it be towed from the front whenever possible.

If the need arises for the unit to be towed from the rear, the towing operator should make sure the steer axle tires are rated high enough to support the unit weight when towing from the rear. It is also recommended that when towing from the rear the distance towed is less than 30 miles at 45 mph.
